

Xiaokai Wang

2357 Stone Rd. Ann Arbor, MI 48015, USA

Email: xiaokaiw@umich.edu

Education

University of Michigan, Ann Arbor, MI, USA

- Ph.D. candidate, Biomedical Engineering GPA: 4.0/4.0 Jan, 2020- Present

Purdue University, West Lafayette, IN, USA

- Ph.D. student, Electrical and Computer Engineering GPA: 4.0/4.0 Sep, 2018- Jan, 2020

Johns Hopkins University, Baltimore, MD, USA

- M.S., Biomedical Engineering GPA: 3.9/4.0 Sep, 2016- June, 2018

Zhejiang University, Hangzhou, Zhejiang, China

- B.S., Biomedical Engineering GPA: 3.9/4.0 Sep, 2012- June, 2016

Professional Experience

Laboratory of Integrated Brain Imaging: Gastric MR imaging, image analysis, machine learning, deep learning, gastric electrophysiology, and neurophysiology

(Graduate Research Assistant, Purdue University and University of Michigan) Aug., 2018- Present

- Project Leader: Characterizing abnormalities in idiopathic and diabetic gastroparesis patients (ongoing)
 - Characterizing gastric motor dysfunctions against normal controls
 - Studying the correlation between quantitative measurements and the severity of the symptoms
- Project Leader: Imaging gastric motor functions in awake rodents (2023-present)
 - Established an imaging protocol to study gastric functions in awake rats, including an animal acclimation procedure and MRI imaging procedure
 - Established an automatic post-processing pipeline to handle the enormous motion artifacts
- Project Leader: A cross-species study in gastric motor functions based on dynamic MRI (2023)
 - Established comparable imaging and mapping pipelines based on dynamic MRI in both humans and rats
 - Captured and compared various aspects of the gastric motor functions across two species
 - Reported potentially new insights about gastric physiology
- Project leader: Non-invasive mapping of the gastric motor functions in rats (2022-2023)
 - Developed a diffeomorphic surface registration algorithm using Neural Ordinary Differential Equations
 - Allowed the tracking of stomach motion over time and enabled a group-level quantification of gastric motility in rats
- Project leader: Accelerate dynamic MRI imaging of gastrointestinal tract in rats (2021)
 - Developed and implemented a fast dynamic contrast-enhanced gastric MRI imaging

- sequence on the 7T Agilent scanner using k-t GRAPPA
 - Achieved ~5 times faster than the commercialized multi-slice gradient recalled echo on the same scanner
 - Achieved a comprehensive coverage of entire stomach using one single volumetric scan
- Project leader: 3D volumetric segmentation of gastric MRI image using deep neural networks (2019-2020)
 - Created manual labels for rats' stomachs as the ground truth (n=30) for training and validation
 - Improved the performances of the MR image segmentation with a deep neural network and achieved ~96% segmentation accuracy on the validation data set with an improved speed of processing
- Collaboration: Electrical and mechanical modulation of the brain-gut interaction (ongoing)
 - Co-establishing the techniques for multi-site brain neurophysiological recordings with simultaneous electrical or mechanical stimulations to the stomach in rats
 - Studying the brain-gut interactions and their modulation with the established platform
- Collaboration: Neuronal tracing with Manganese-Enhanced MRI (2023- present)
 - Contributed to tracing vagal afferent projections using MEMRI
 - Re-analyzed the existing data for validating the activity-dependent MEMRI technique
 - Replicated the same results on a different image scanner (7T Agilent scanner vs. 7T Brucker scanner)
 - Working on improvements to the existing technique
- Collaboration: The pathways and mechanisms for stomach-brain interactions (2021-2022)
 - Co-established the technique to simultaneously record surface electrogastragram or serosal gastric myoelectrical activities with dynamic contrast-enhanced MR imaging of the gut or functional MR imaging of the brain in rats
 - Verified the developed fast imaging techniques using these concurrent electrical recordings based on the electrical-mechanical coupling
 - Studied the coherence between the brain and the gut with the developed technique
 - Studied the orientation-tuning properties of the NTS neurons
- Collaboration (Takeda): Test prokinetic medicine for promoting gastric motility in rats (2018)

Image Analysis and Communication Lab: Motion Tracking Algorithm, Tagged MRI

(Graduate Research Assistant, Johns Hopkins University)

May, 2017- June, 2018

- Project Leader: Characterizing the tongue muscle movements during speech based on tagged MRI
 - Tested different digital filters for 3D HARP analysis of tagged MRI
 - Exhibited approximately 50% improvements in tracking accuracy in MICCAI challenge phantom datasets compared with traditional methods
 - Established a strategy to distinguish between consistent and inconsistent sequential tagged MRI images

Undergraduate Thesis Project: Electrohydrodynamic Printing

(Undergraduate, Zhejiang University)

Jan., 2016- May, 2016

- Project Leader: EHD Direct-Writing 3D Macro/Nano-Scaled Patterns
 - Achieved 3D patterns with direct writing technique by using variable speed settings
 - Examined the influence of different parameters on the formation of the specific 3D pattern

Summer Research Training in the University of Rochester: Diffuse Optics Methods

(Summer Research Intern, University of Rochester)

July, 2015- Aug., 2015

- Collaboration: Optimization of the diffuse optics methods in detecting breast cancers
 - Co-designed optimal probe for breast cancer imaging in remission geometry
 - Simulated the influence of anomaly locations and sizes on image quality when using specific breast probe
 - Collected simulated results.

Undergraduate Student Research Training Project: Research on Respiratory Gases Monitor

(Undergraduate, Zhejiang University)

Nov., 2014- May, 2015

- Collaboration: The design of a respiratory gas monitor to detect bad breath in humans
 - Co-designed the respiratory gases monitor to detect bad breath in humans
 - Designed a sensor array using MQ-3 and TGS-2602
 - Developed an APP to record, display, and analyze sample data and give corresponding medical advice
 - Conducted calibration using training experimental data and achieved approximately 80% detection accuracy
 - Won an outstanding school project award

Teaching Experience

Guest Lecturer, Machine Learning for Biomedical Signal and Image Processing, BIOMEDE 599

Sep., 2023- Dec., 2023

- Gave a guest lecture about medical image registration
- Held office hours to help address questions about medical image segmentation, deep neural networks, and Python programming

Teaching Assistant, Image Processing and Analysis EN.520.614

Sep., 2017- Dec., 2017

- Held weekly office hours to answer questions related to course materials and homework
- Graded HW assignments

Internship Experience

Intern, Sir Run Run Shaw Hospital Equipment Division

Jan., 2015- Feb., 2015

- Learned to operate common medical imaging systems

- Maintained syringe pumps
- Observed minor surgeries

Extracurricular Activities

Social Investigation Project in the National University of Singapore

July, 2014- Aug., 2014

- Led team to investigate the health care system and BME programs in China
- Arranged a seminar to compare educational issues, health care systems, and the doctor-patient relationship between China and Singapore
- Awarded as the Most Outstanding Student on the project

Prizes & Awards

- (2024) Richard and Eleanor Towner Prize for Outstanding Ph.D. Research
- (2024) ISMRM Summa cum Laude Merit Award
- (2022) Glenn V. Edmonson Scholarship
- (2021) ISMRM Magna Cum Laude Merit Award
- (2013-2015) First-Class Academic Scholarship
- (2013-2015) Outstanding Student
- (2014) First Prize in 'Sanhao Cup' Volleyball Match
- (2013) Third-Class Academic Scholarship
- (2013) Freshma

Skills

- *Software:* MATLAB, Multism, LabView
- *Language:* Python, C, C++
- *Wet-lab:* rat and mouse handling, anesthesia, euthanasia, blood collection, abdominal recovery surgery, and brain recovery and non-recovery surgery in rats
